

Gas Mileage Log and Calculator

To use this, you need to completely fill the tank each time you fill-up. Record the odometer at each fill-up. Calculate the net distance by subtracting the old odometer reading from the current one. Enter the gallons of gas purchased. Divide the net distance by the gallons, and you get your miles per gallon. The first two lines are examples. A spreadsheet version is available at sign-in-sheet.com.

Odometer	Net Distance	Gallons Gas Purch.	Miles Per Gallon
100		/	=
400	300	/ 10	= 30
